

1. Anchor-foot - Eliminates carrier-fitting rock in dry wall construction; requires fewer securing bolts for installation.
2. Intermediate length body - installs in slabs through 8" thickness. 4" SV hub fits inside 6" I.D. sleeve.
3. Fitting designed for No-Hub or SV gasket connection. (4", 5", & 6" waste with 2" vent)
4. Optional side inlets designed for SV gasket connection.
5. Heavy-duty plastic coupling (11" standard, longer couplings available with rod support feet).
6. Adjustable feet that supports the faceplate on two bearing surfaces for the entire height-slots on the side and front for ease in installation as well as ease for prefab.
7. Invertible faceplate fits both siphon jet and blowout water closets - permits high-rough installations without special support equipment.
8. Bowl-saver-nut - simplifies fixture setting and assures rigid connection without breaking the fixture.
9. One piece chrome-plate washer/nuts.
10. Integral Test Cap.

**Ty-Seal**

Wade carriers for SV pipe have the same hub and spigot conformation and tolerances as TYLER SV soil pipe; they are produced in the same foundry and are subject to the same quality controls. Compatibility helps assure quick, easy and dependable SV installations.
