

## Exclusive Features of 9100 Series Square-Top, Round Sump Stainless Steel Floor Sink.

Square Top + Round Sump - First of its kind; the sump is round and smooth for easier cleaning; the square top offers a more attractive appearance and easier tiling base for square tile floors.

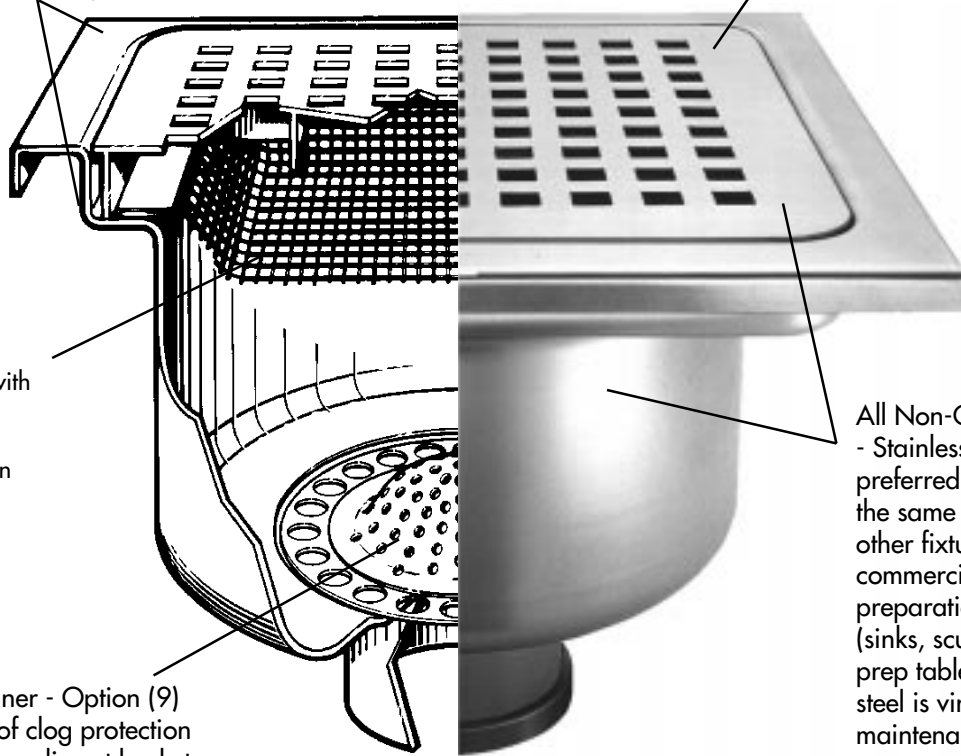

Non-Tilt Grate - Skirted grate nests inside the ledged square top body. Reinforcing assures dependability in high-traffic areas.

Sediment Basket - Unique basket (one piece die pressed #6 stainless steel mesh) with stainless steel frame provides clog protection. Basket can also be used as a depressed grate in limited access areas.

Beehive Dome Strainer - Option (9) offers second level of clog protection when used with the sediment basket. Designed to drain with sink filled to rim with debris.

One Step Connection - compression gasket push-on connection (with gasket furnished) or No-Hub (spigot outlet) for connection to hubless or SV cast iron. (Available in 2", 3" or 4").

All Non-Corrosive Parts - Stainless steel is preferred because it's the same material as other fixtures in commercial food preparation areas (sinks, sculleries, salad prep tables.) Stainless steel is virtually maintenance-free.

### OTHER AVAILABLE FEATURES:

1. Flange and clamp device if required.
2. Half or three-quarter grates: for indirect waste reception under equipment while grate permits adjacent pedestrian traffic.
3. Attachable nickel bronze funnels: for indirect waste reception.

### How To Order

To order a stainless steel floor sink with 4" outlet and dome bottom strainer.
